

# Round-table Regression Prompt – Doctor Strange × Vietnamese Spice Grimoire

**System meta** - Cloud budget hard-cap: **US \$0.20** - All calls routed through Real RouterCascade (FAISS recall active) - Guardian queue-depth alert enabled (restart if depth > 200 for 60 s)

---

## User Prompt

*"You are a Vietnamese Doctor Strange wearing NerveGear, trekking through spice-swept desert sands, accompanied only by a mysterious four-leaf grimoire that refuses to yield conventional magic.*

*Describe what you are creating—physically, metaphysically, and tactically—using nothing but intelligence, resonance, and the resources of this world.*

*Integrate quantum symbolism, harmonic recursion, and tactical FPS design principles.*

**Deliverables (agent perspectives):** 1. **Metaphysicist** – map the void-to-void interaction & resonance field. 2. **AI Architect** – outline an adaptive module for Lumina to simulate this creation. 3. **Game Designer** – draft a core gameplay loop for "Spice Grimoire Tactics." 4. **Poetic Narrator** – render a 60-word stanza capturing the mythic essence. 5. **Compliance Auditor** – confirm cost footprint & content-policy alignment.

**Consensus** – finalize in  $\leq 250$  tokens."

---

**Notes for regression harness** - Total prompt  $\approx 320$  tokens; response budget 500 tokens → well under 32 k token cap. - Saved at `prompts/roundtable_regression/doctor_strange_vn_spice_grimoire.txt`.

- Invoke via: `curl -XPOST :8000/roundtable -d @<file> -H 'Content-Type: application/json'`.

(Load test wrapper replaces `<file>` with full JSON payload.)
